

Environmental and Quality Policy

FMW Recycling is a Confidential Destruction / Recycling Company. The company operates an extensive range of recycling activities in Balbriggan specialising in the collection, dismantling, recovery and remanufacture of certain industrial and commercial wastes for further reprocessing.

The business operates under the conditions of Waste Management and Waste Collection Permits and commits to continuous compliance with all relevant legislation and regulations.

We strive to achieve excellence in our business activities and total customer satisfaction, whilst conducting our operations in such a manner as to prevent pollution and control our impacts on the environment. To further this goal, FMW Recycling are committed to:

- ❑ Implementing a documented, open and certified (ISO14001:2004) Environmental Management System (EMS) to assist in the identification, control and effective management of our impacts on the environment.
- ❑ Maintaining a certified (ISO 9001:2000) Quality Management System (QMS) and complying with the requirements thereof.
- ❑ Providing a safe and healthy environment for all employees.
- ❑ Educating and training staff to encourage participation and good work practice at all levels.
- ❑ Identifying roles and responsibilities at all levels within the organisation for the effective implementation and co-ordination of the EQMS (Environmental and Quality Management Systems).
- ❑ Setting objectives and targets with the aim of achieving continuous improvement in relation to our environmental and quality performance and identifying corrective action procedures where necessary.
- ❑ Reducing volumes of waste diverted to landfill through our business activities and encouragement of waste minimisation within our facility.
- ❑ Monitoring our energy consumption and endeavouring to increase efficiency, in recognition of the impact of greenhouse gas emissions on the environment and the need to conserve non-renewable resources.
- ❑ Measuring and recording, where possible, to demonstrate the effectiveness of our systems and comparison of our performance year-on-year, using suitable indicators.
- ❑ Applying the principle of BAT (Best Available Technologies) to our operations, particularly in the purchase of machinery and vehicles.
- ❑ Regular management review of the EQMS to identify issues arising from the day-to-day management and operation of our business.

This Environmental & Quality Policy will be communicated to employees and site personnel. It will also be displayed in a prominent location in our facility and will be made available to the public and all interested parties upon request.

Cathal Delaney, Managing Director
